TCWP Chair
Croatia

Major achievements

During 2022 the Transplant Complications Working Party (TCWP) finalised in the form of publications several important projects: a systemic review on male late effects in collaboration with CIBMTR, harmonisation of guidelines on diagnosis and harmonisation of definitions for diagnostic and prognostic criteria of transplantation-

associated thrombotic microangiopathy. Several studies were finalised in the form publications, including first real-life experience with cytopenias and organ toxicities post CAR-T therapies. On the basis of these two studies the process of recommendations preparation was started to address cytopenia after CAR-T. TCWP conducted a successful educational meeting in September in a format of patient case discussion and sharing practical skills.

In this year's educational meeting both patient advocates, nurses and best abstract winners participated in the sessions, which significantly improved the audience feedback and participation in the activities. TCWP also actively participated in the 7th International Transplant Course in Barcelona in September. Significant work was done on harmonisation of definitions for the new EBMT database to improve the quality and speed of TCWP studies in the future.

Principal research studies

Effects of donor clonal hematopoiesis in unrelated HSCT
Study type
Retrospective Studies
Diseases

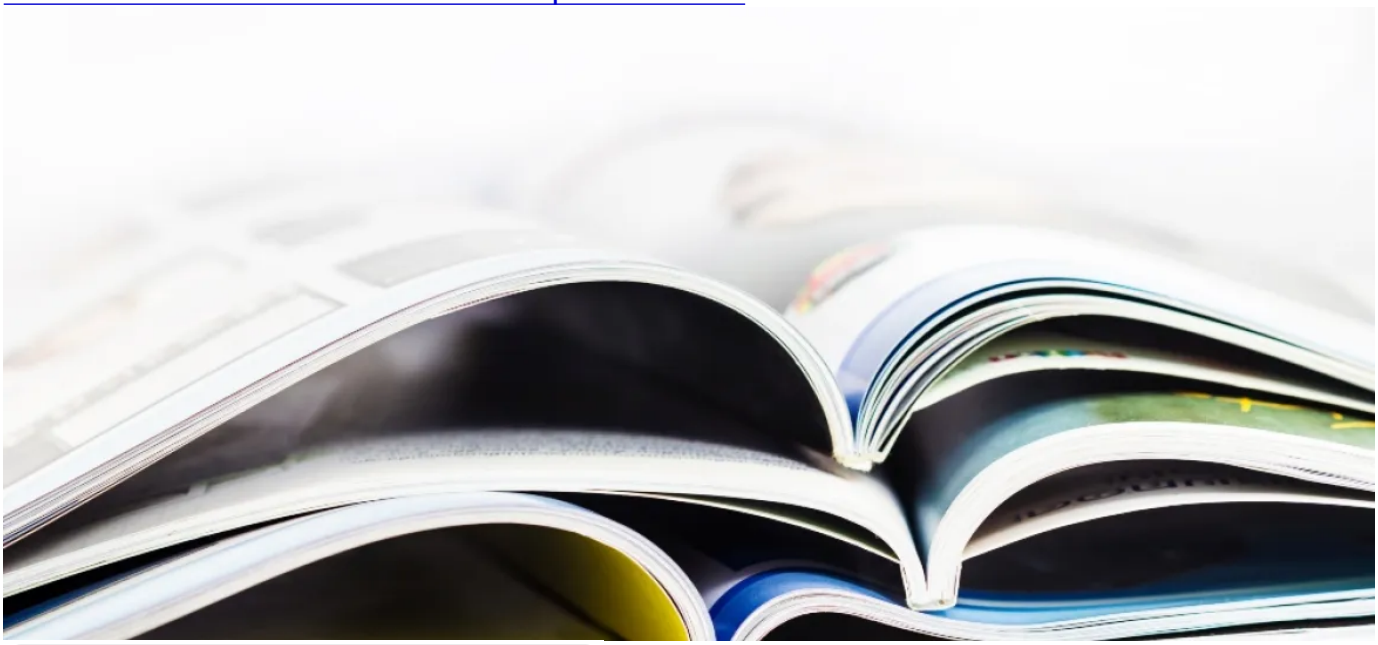

Group
Complications Working Party (CWP)
Type of treatment
Allogeneic
Principal investigator
F. Damm & J. Schetelig

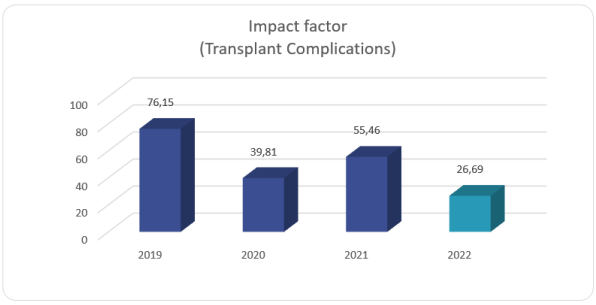

Key publications

2022
Practice patterns in chronic graft-versus-host disease patient management and patient reported outcome measures across the EBMT allogeneic transplantation network
Group
Complications Working Party (CWP)
1st listed author

Vladimir Perovic
Journal
Bone Marrow Transplant.
2022
Complications of Autologous Stem Cell Transplantation in Multiple Myeloma: Results from the CALM Study
Group
Chronic Malignancies Working Party (CMWP)
