Fabio Ciceri

ALWP Chair (ELECTED MARCH 2022, PREVIOUS CHAIR: Mohamad Mohty)

Italy

Major achievements

The activity of the ALWP continues to increase thanks to the great contribution of the ALWP members and collaborators and the continuous efforts of the ALWP staff. We receive constant demonstration of appreciation by a continuous increase in the study proposals, and for this I really recognize the unique dedication and

commitment of the entire ALWP staff, and I am grateful for that. The established organisation of ALWP in sub-committees reflects the wide area of interests and improves both continuity of investigators and participation in a scenario of high rate of scientific production.

The number of transplants for patients with acute leukaemia is constantly growing, with increase in the HCT indications, as well the age of the patients and diseases. New drugs are available for both conditioning regimens and maintenance therapies, as well post-transplant management to decrease disease recurrence and non-relapse mortality. ALWP achieved a great number of peer reviewed publications, as it happens during the previous years, in key high impact factor journals, and presentations to international conferences on haematology and transplants.

In line with the scientific initiative started last year, ALWP is still collecting the data on next-generation sequencing (NGS) data and use of novel drugs, with the aim to improve the quality of the registry and the scientific output of the publication to the benefit of the patient's care.

I am very grateful for tireless efforts in sending such complex data, which will definitely lead to the generation of new knowledge to further advance the management of acute leukaemia.

Principal research studies

[Trends in allogeneic stem cell transplantation \(HSCT\) over two decades in patients with secondary acute myelogenous leukemia \(sAML\) being transplanted from sibling \(MSD\) or unrelated donors \(UD\). A Study on Behalf of the Acute Leukemia Working Party of the European Society for Blood and Marrow Transplantation.](#)
