To improve the quality of the data that is currently available in the EBMT database, improve the follow up data and reduce future work load for centres.

**Aim**

In March 2017 excel files were send out with all Bone Marrow Failure patients per centre that are prefilled with the data currently available in the EBMT database. Centres were asked to check the available data and provide missing data. Importantly this will include information about pretreatment regimen, engraftment, graft versus host disease, relapse and last follow-up.

**Strategy**

358 centres were contacted. In February 2018 61 centres returned a completed Excel file. Another 50 centres agreed to send their patient data. In January a new reminder was send to all centres. Data collection is still ongoing and will be closed mid June 2018.

**Status**

For more information on this initiative, please contact the study coordinator at saawpebmt@lumc.nl.

---

**Deadline data collection: June 15th, 2018**

---

**Available data**

Mid January there was (good quality) data was entered in our data base of 1114 patients (60 centres). 1046 first transplants, 485 first immunosuppressive treatments. The figure below shows the percentage of available data for some key variables for all invited patients (orange bars) and for all patients completed by this DQI (blue bars) at different time points, at diagnosis, at HSCT, at follow-up and at the end of the graph the availability for immunosuppressive treatments.
