

Transplant Complications Working Party Educational Meeting

Berlin, Germany
29 Sept. - 1 Oct. 2022

How to survive stem cell transplantation and CAR T-cell therapy Guide for Physicians and Nurses

Treatment related mortality and morbidity remain major challenges in stem cell transplantation and in CAR T-cell therapy. Losing a patient's life due to a treatment-related complication is always a tragedy for everybody being involved. The good news are that optimizing prevention and management of complications improves survival and reduces morbidity.

The course will specifically focus on practice-based topics that are underrepresented in articles or books. Attendees will get hands on teaching by clinical experts on how to improve competence and skills. After this course, the attendees and their respective patients will increase their abilities in order to survive stem cell transplantation and CAR T-cell therapy.

We hope you enjoy the course.
