

## Amendment to the EBMT Study Proposal and Selection Process for the Nurses Group

To support EBMT's scientific mission of becoming the EU reference in blood and marrow transplantation and cellular therapy, a standardized policy for protocol submission and selection across all EBMT Working Parties (WPs) has been proposed. This aims to improve transparency, feasibility assessment, and workload distribution, addressing delays caused by overburdened study teams. By limiting the number of simultaneous studies and aligning available resources with study demands, the time to publication is expected to decrease, increasing both relevance and impact. Therefore, to achieve its Scientific purpose, EBMT proposes a standardised policy for protocol submission and selection across all EBMT WP ([EBMT Study Proposal and Selection Process v1.0.pdf](#)) As the structural setup and research activity within the EBMT Nurses Group differ from those of other WPs we have developed an adapted amendment to this policy.

### I. Proposing the study idea

In our group, research proposals are **accepted** on an ongoing **basis** to encourage engagement and build research capacity while still aligning with the overarching EBMT standards for protocol evaluation.

### II. Preparing the study protocol

Please use the EBMT NG Study Protocol Template. When completed please submit to the Nurses Group Study Coordinator at [nursesgroup@ebmt.org](mailto:nursesgroup@ebmt.org)

### III. Assessing the study protocol

Please see the Proposal Review Flowchart for the actions after the submission.
