Achievements in 2015

SCIENCE

- **258** ongoing studies/projects
- **73** publications in peer-reviewed journals
- **35,316** transplants registered in the Registry

EDUCATION

- **20** educational events
- **4,393** delegates at EBMT 2015

PATIENT CARE

ACCREDITATION

- **71** received applications
- **64** performed inspections
- **50** awarded accreditations

NURSING

- Education
- Production of a documentary film; practical guides
- Research projects
- Collaboration

SCIENCE

- The Working Parties use data from the **EBMT patient Registry** to perform three types of studies:
 1. Retrospective data collection studies
 2. Non-interventional cohort studies
 3. Interventional studies (Prospective Clinical Trials)

258 ongoing EBMT Studies

3 trials are recruiting patients:

- AAWP : **RACE** compares standard IST (ATG + CsA) plus Eltrombopag vs standard IST alone.
 - This EBMT sponsored trial is financially supported by Novartis and Pfizer. 32 participating EBMT Centres.
 - 22 patients enrolled
 - 8 sites open
- CQWP/IDWP : **CMV prophylaxis** phase III RCT to Evaluate the Safety and Efficacy of MK-8228 (Letermovir) for the Prevention of CMV Infection in adult, CMV-Seropositive Allogeneic HSCT Recipients.
 - This Merck sponsored trial is supported by the EBMT (recruitment and retention services) – 569 out of 540 patients recruited (a little more due to Japanese obligations).
- ALWP : **HCT vs CT in elderly AML**
 - This EBMT sponsored trial is outsourced (running from Leipzig)

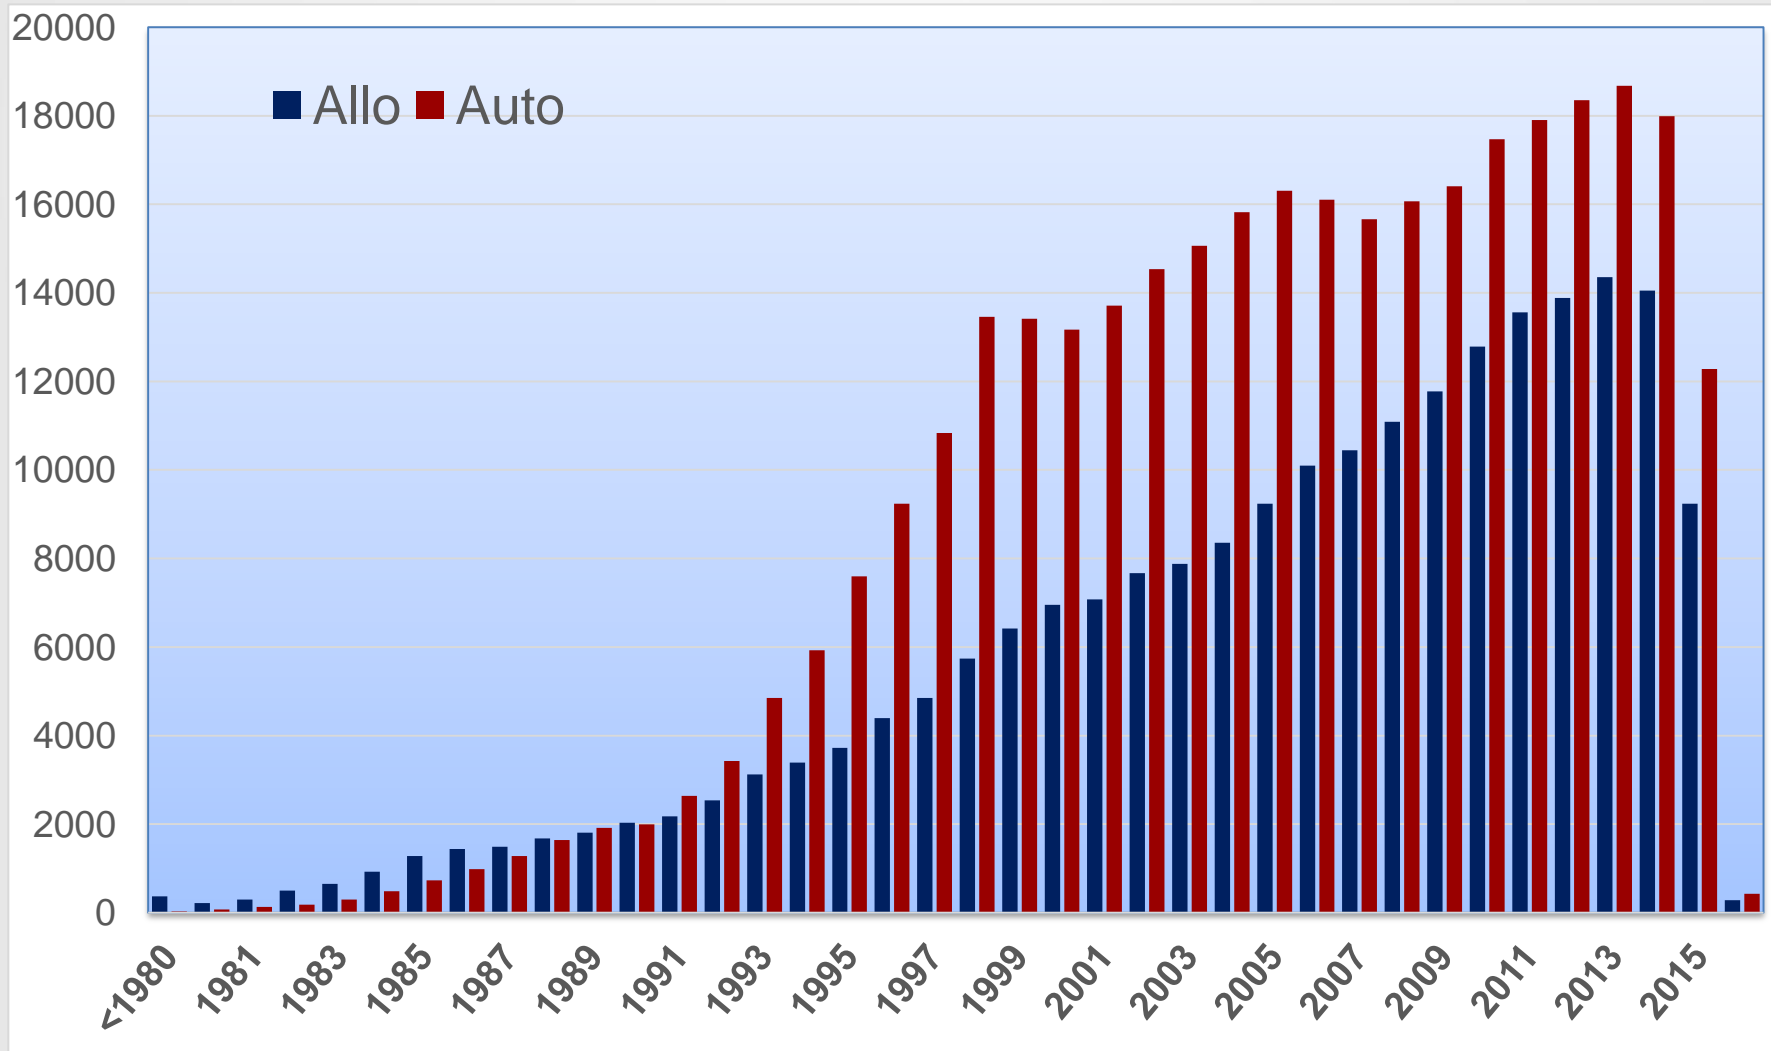

1 trial was published in the last year:

- ADWP : **ASTIC** was published in JAMA in Dec 2015

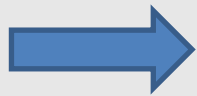

4 trials in follow up/analysis phase:

- CMWP : **RICMAC**
- ADWP : **ASTIS, ASTIC**
- LWP : **Lym1**

Type of transplant by year

- The EBMT has the paramount responsibility to maintain the Registry
- New challenges:
 - The existing Registry system has reached its limit
 - Extend the Registry to cellular therapy products and link clinical data to biobanking for defined subset of patients arising from defined EBMT activities
- Last fundraising campaign:
 - Support of 15 donors
 - Remedy ceased all business operations in 2014, the EBMT identified four proposals that are being assessed

The EBMT Board made the decision to allocate a substantial part of the EBMT benefits to continuous structural innovation and to give the Society the clear objective of developing a new Registry system operational by 2020.

Hematopoietic stem cell transplantation in Europe 2014: more than 40 000 transplants annually

JR Passweg¹, H Baldomero¹, P Bader², C Bonini³, S Cesaro⁴, P Dreger⁵, RF Duarte⁶, C Dufour⁷, J Kuball⁸, D Farge-Bancel⁹, A Gennery¹⁰, N Kröger¹¹, F Lanza¹², A Nagler¹³, A Sureda⁶ and M Mohty¹⁴ for the European Society for Blood and Marrow Transplantation (EBMT)

A record number of 40 829 hematopoietic stem cell transplantation (HSCT) in 36 469 patients (15 765 allogeneic (43%), 20 704 autologous (57%)) were reported by 656 centers in 47 countries to the 2014 survey. Trends include: continued growth in transplant activity, more so in Eastern European countries than in the west; a continued increase in the use of haploidentical family donors (by 25%) and slower growth for unrelated donor HSCT. The use of cord blood as a stem cell source has decreased again in 2014. Main indications for HSCT were leukemias: 11 853 (33%; 96% allogeneic); lymphoid neoplasias; 20 802 (57%; 11% allogeneic); solid tumors; 1458 (4%; 3% allogeneic) and non-malignant disorders; 2203 (6%; 88% allogeneic). Changes in transplant activity include more allogeneic HSCT for AML in CR1, myeloproliferative neoplasm (MPN) and aplastic anemia and decreasing use in CLL; and more autologous HSCT for plasma cell disorders and in particular for amyloidosis. In addition, data on numbers of teams doing alternative donor transplants, allogeneic after autologous HSCT, autologous cord blood transplants are presented.
