Date: March 2010

Subject: Non-Interventional Prospective Study to investigate the long-term efficacy and feasibility of routinely installed punctal occlusion for severe dry eyes after allogeneic stem cell transplantation.

Dear Participant,

We appreciate it very much that you will participate.

The EBMT decided that in general for this non-interventional prospective study, no ethical approval is necessary, but this could differ per centre. Please contact your EC in case of any doubts.

If you decide a patient consent form should be collected for this study could you please collect and file these forms on every consecutive patient you will include in this study at your centre.

All forms will be available on the EBMT website soon.

Thank you so much for your cooperation.

Best regards.
